

CONTEXT⁴
HEALTHCARE

VALUE POINTS

- Ensure claim accuracy
- Reduce denial rates & lost revenue
- Decrease & eliminate resubmission costs

EDITING TECHNOLOGY

ClaimsEditor[®]

Claims editing customized to your workflow

CLAIM EDITING CAPABILITIES:

Context4 Healthcare's editing technology scans batches of claims to identify incorrect technical and clinical errors. The Context team monitors Medicare, Medicaid, FI, MAC and RAC policies at the local, state and national level. Edits dating back to 1994 result in millions of combinations to ensure claim accuracy.

- We create, edit and change rules upon learning of a change in policy
- Rules based logic allows rules and edits to be updated immediately
- Edit utilization across patient history
- Customized rules can be created to address specific payor requirements
- Speed – the application can process a claim in milliseconds
- Our software audits all standard billing forms

APPLICATION DEPLOYMENT:

The application can be integrated into an existing claims process. Customers can take advantage of Context's online Software as a Service (SaaS) solution or use Context's proprietary software development kit (SDK) to create applications that directly communicate with the editing engine.

- Context's SaaS products include:
 - ▶ ClaimsEditor[®]
 - ▶ RAC Solution[™]
 - ▶ Medical Necessity Check with Advance Beneficiary Notification (ABN)
- Software Development Kit (SDK):
 - ▶ Using common applications such as API, FTP and VPN a customers can integrate the editing application into their existing claims software
 - ▶ Customers can create interfacing applications using HL7 communication protocols to seamlessly communicate with the application Context's development provides expert
